Work

Software Developer Plejd 2018 - 2019

- Took part in designing, developing and testing an in-house built embedded Linux system.
- Our team (of four people) created a custom Linux operating system running microservices.
- I was responsible for (among other things) design and implementation of the libraries used for service development.
- I implemented software that communicated with coprocessors, TCP/IP, cloud services, software update servers, mobile applications, production test fixtures and third-party services.
- Participated in creating an extensive system for telemetry while maintaining the personal integrity of our customers.
- We focused on building a future proof, maintainable and reliable system with great extensibility. The design allowed us to continuously expand the system with new functionality.

Software Developer Inceptive 2017

- In a six-month project we developed a cross-platform application with Unity (C#) that visualised traffic data in augmented reality.
- I was responsible for data streaming and ARKit integration.

Mail Carrier Postnord Summer 2017

Care Assistant Eksjö Kommun Summer 2015 and 2016

Education

M.Sc. in Computer Science and Engineering 2019 - 2024 Linköpings Universitet

- Student representative.
- Guitarist in D-Band, the student band of Datateknologsektionen.

Courses in Computer Science 2016 - 2018 Göteborgs Universitet

Courses related to embedded systems, computer architecture, databases, functional-, object oriented- and parallel programming.

Technical programme 2013 - 2016 Eksjö gymnasium

Musical profile with focus on guitar. Teknikcollege scholar. Received additional scholarships for my achievements in guitar playing and programming.

Skills

Languages

- Swedish and English.

Programming Languages

- Proficient at C, Python, Swift, Java, C++ and SQL.
- Experience with Ragel, Erlang, Haskell, Rust, Objective-C, hardware programming in VHDL and assembler programming for AVR, MIPS and ARM.

Other

- Proficient with Git, Docker, NATS, Linux and macOS.
- Great knowledge of Apple platforms and development with SwiftUI and UIKit.
- Experience with Buildroot, Eclipse HawkBit and U-Boot.
